

RTSA Requirements Status

April 2026

Minimal readiness snapshot for supervisor sentiment monitoring

Ready
Core live monitor

Partial
Annotation + audit

Pending
Reports + workflow

Requirement Matrix

Area	Status	Notes
Supervisor Dashboard	Mostly Ready	Agent list, live sentiment, score, status, at-risk state, team and agent filters are available.
Agent Detail View	Mostly Ready	Session detail includes sentiment chart, transcript, and monitor actions. UCID/customer info needs clearer display.
Monitor Actions	Ready	Silent Monitor, Whisper, and Barge-In/Takeover are wired through the TMAC bridge.
TL Annotation	Partially Ready	Call review and history exist. One-annotation-per-call and real logged-in TL ID still need enforcement.
Alert Handling	Pending	Acknowledge and Dispute actions are not visible in the UI yet.
Pagination / Sorting	Pending	Agent list needs pagination and explicit At-Risk sorting control.
EOD Report	Pending	Flagged UCIDs, TL actions, filters, and export are not implemented as a report screen.
Overall Reporting	Pending	Power BI / OCM reporting, trends, drill-down, and reporting filters are outside the current UI.
Audit Trail	Partially Ready	Annotation history stores reviewer, timestamp, ID, and comment. Supervisor ID is currently hardcoded.
Non-Functional	Needs Validation	Real-time performance, security, scalability, and high availability need backend/deployment confirmation.
Enhancements	Partially Ready	At-risk highlighting is available. AI confidence score, heatmaps, and report export are pending.

Ready Now

- Live Agent Sentiment Monitor
- Team and agent filtering
- At-risk highlighting
- Live sentiment chart
- Call transcript view
- Silent Monitor / Whisper /
- TL call annotation with comment

Pending Items

- UCID and customer info display
- Pagination
- At-risk sort control
- Acknowledge / Dispute alert
- Enforce one annotation per call
- Replace hardcoded TL ID with
- EOD Summary and Intervention
- Export reports
- Power BI / OCM reporting
